

Electric Wood Router with Adjustable Depth

This electric router is engineered for precise woodworking and routing applications. It features adjustable depth settings and a durable construction, suitable for edge profiling, grooving, and other decorative work.

Product Overview

High-Performance Woodworking Precision

This electric router is engineered for precision woodworking, offering a robust solution for diverse routing applications. Designed for durability and efficiency, it features a powerful motor capable of achieving high-speed performance for smooth material removal. It is an ideal tool for professionals requiring accuracy in edge profiling, grooving, and decorative wood crafting.

Technical Specifications

Rotational Speed

22000 r/min
Speed

Collet Size

12 mm

Application & Features

Key Features

- Powerful motor for efficient cutting
- Adjustable depth settings for precision
- Durable construction for long-term use

Supported Routing Tasks

Edge Profiling, Grooving, Decorative Work
