

Electric Wood Router with Adjustable Guides

This electric power tool is suited for precision work on materials like wood or plastic. The adjustable components allow versatility in cutting depths and widths.

Overview

Precision Woodworking Performance

This compact electric wood router is engineered for high-precision tasks in woodworking and plastic fabrication. Featuring an adjustable guide system, it allows operators to fine-tune cutting depths and widths for consistent, professional results. Its robust motor housing and durable metal base design ensure stability and longevity in demanding workshop environments.

Technical Specifications

Power Source	Electric (Wired)
Base Material	Metal
Housing Color	Blue

Features

Suitable Materials

- Wood
- Plastic

Adjustment Features	Adjustable Guides, Variable Cutting Depth, Precision Control
