

Electric Wood Router with Variable Speed

This compact electric router is designed for woodworking and other material shaping applications. It features a variable speed motor for precise control, adjustable cutting depth, and ergonomic handles for comfortable operation.

Overview

Precision Woodworking Power

This compact and powerful electric router is engineered for professional woodworking and material shaping applications. It features a versatile variable speed motor that provides precise control, allowing for smooth operation across different materials. With adjustable cutting depth and ergonomic handles, it is designed for comfort and accuracy in tasks such as edge profiling, groove cutting, and decorative woodwork.

Performance

Motor Control	Variable Speed
Key Applications	Edge Profiling, Groove Cutting, Decorative Work, Material Shaping

Design & Ergonomics

Build Quality

Durable Construction

Adjustment Features

- Variable speed control
- Adjustable cutting depth

Handling	Ergonomic handles for comfortable operation
