

Electric Wood Router

This electric router is designed for woodworking and other routing applications. It features a variable speed motor for precise control, depth adjustment for accurate cuts, and a comfortable ergonomic grip for extended use.

Product Overview

Professional Electric Wood Router

This compact and powerful electric router is engineered for precision woodworking and versatile routing applications. It features a variable speed motor for superior control and an adjustable depth mechanism to ensure accurate cuts every time. Designed with user comfort in mind, the ergonomic grip allows for extended use without fatigue, making it an ideal choice for edge forming, trimming, and intricate decorative routing tasks.

Technical Specifications

Key Features

- Variable speed motor control
- Adjustable depth settings
- Ergonomic grip design

Design Focus

Compact • Powerful • Ergonomic

Primary Applications

Edge Forming, Trimming, Decorative Routing
