

Electrical Contact Rivets

Precision-engineered contact rivets designed for reliable electrical connections. Constructed from high-quality materials, they offer excellent resistance to corrosion and wear.

Overview

Precision Electrical Contact Rivets

These precision-engineered contact rivets are designed to provide reliable, high-performance electrical connections. Constructed from a high-quality combination of silver and copper, they offer excellent conductivity, durability, and resistance to wear and corrosion. They are essential components for ensuring secure and consistent contact in a wide range of electrical devices, including wall switches, push buttons, relays, and AC contactors.

Technical Specifications

Typical Applications

- Wall switches
- Push button switches
- AC contactors
- Relays

Material Composition	Silver, Copper
-----------------------------	----------------

Quality & Compliance

Certifications

CE • ISO 9001
