

# Electrical Enclosure Panel Fan Filter Unit

Panel fan filter units provide filtered air ventilation in electrical enclosures and cabinets. The filter is easily replaceable, ensuring continuous efficient operation and a clean, cool environment for sensitive electronic components.

## Product Overview

### Optimized Enclosure Ventilation

This panel fan filter unit is engineered to provide essential filtered air ventilation for electrical enclosures and cabinets. By incorporating a louvered grill design, it effectively prevents the ingress of dust and airborne particles, while the integrated filter media captures finer contaminants to maintain a clean internal environment. This solution helps protect sensitive electronic components from overheating and environmental debris, ultimately extending the lifespan and operational reliability of your equipment.

## Design & Construction

### Key Features

- Louvered grill design for debris protection
- Replaceable filter media for easy maintenance
- Exterior mount configuration
- Optimized for electrical enclosures and cabinets

### Mounting Type

Exterior Enclosure Mount

## Maintenance

### Filter Maintenance

Easily Replaceable • Continuous Operation
