

Electrically Actuated Ball Valve for Automated Fluid Control

This electrically actuated ball valve is designed for automated fluid control systems. It allows for remote operation, providing precise on/off control.

Product Overview

Automated Fluid Control Solution

This electrically actuated ball valve is engineered for reliable, remote-controlled fluid management in industrial and commercial systems. Featuring a robust metal body for durability and corrosion resistance, it integrates seamlessly into automated pipelines. The unit includes a dedicated electric actuator that provides precise on/off control, making it an essential component for modern fluid handling infrastructure.

Technical Specifications

Actuation Type	Electric
Body Material	Brass Alloy
Actuator Housing Material	Durable Composite
Control Function	Remote Operation, On/Off Control
