

Electrically Actuated Brass Valve

This electrically actuated valve controls fluid flow in industrial applications. It features a brass valve body and electric actuator for remote operation.

Product Overview

Industrial Fluid Control

The Electrically Actuated Brass Valve is engineered for precise fluid flow management in demanding industrial environments. Featuring a durable brass body and reliable electric actuation, this unit supports efficient remote operation. It is built to withstand rigorous service, providing consistent performance for various flow control applications.

Technical Specifications

Body Material	Brass
Actuation Method	Electric
Key Features	Remote Operation, Industrial Grade, Precise Control
