

Electricity Meter for Power Systems

This meter monitors electricity usage in power systems. It provides real-time data and control functionalities.

Overview

Advanced Power System Monitoring

This electricity meter is engineered for precise monitoring and protection within complex power systems. It provides real-time data acquisition and control capabilities, ensuring reliable performance for critical electrical infrastructure. Designed for professional industrial applications, it facilitates accurate system management and operational safety.

Model Number	QS82110
Primary Function	Microcomputer transformer differential protection
Key Features	Real-time monitoring, System protection, Control functionality
