

Electro-Hydraulic Rectangular Scrap Grab

This electro-hydraulic grab utilizes an electric-powered hydraulic system. The motor force is increased for enhanced diving force into bulk materials.

Product Overview

High-Efficiency Scrap Handling

This electro-hydraulic rectangular scrap grab is designed for heavy-duty industrial material handling. Utilizing a powerful electro-hydraulic system, it offers enhanced gripping force and precise control via a dedicated control panel. The mechanical structure is engineered for simplicity and durability, requiring minimal maintenance beyond standard greasing, and is built to operate reliably under diverse working conditions.

Technical Specifications

Design Technology	3D Virtual Design, Interference Checking
Maintenance	Minimal; requires only periodic greasing
Control Method	Control Panel

Customization & Ordering

Required Specifications for Quote

- Lifting material type
- Grab cubage (capacity)
- Maximum crane lifting weight
- Working environment conditions
