

# Electromagnetic Horn for Textile Machinery

This electromagnetic horn is designed for use in textile machinery. It provides an audible signal for alerts and notifications during the machinery's operation.

## Product Overview

### Industrial Signaling Solution

This electromagnetic horn is engineered specifically for textile machinery applications, providing reliable audible signaling for critical alerts and process notifications. Its robust design ensures performance in demanding industrial environments, while the compact form factor allows for seamless integration into existing control systems and machinery layouts.

## Technical Specifications

### Design Feature

Compact Design

### Component Type

Electromagnetic Horn

### Primary Application

Textile Machinery, Industrial Automation, Alarm Systems
