

Electromechanical Timer for Cleaning Machines

Electromechanical timer designed for use in cleaning machines. Features multiple terminal connectors for versatile wiring configurations.

Product Overview

Industrial-Grade Timing Solution

This electromechanical timer is specifically engineered for integration into industrial cleaning equipment. It provides reliable control over critical operational phases, such as wash and rinse cycles, ensuring consistent performance in demanding environments. Built with a durable plastic housing and featuring versatile terminal connectors, this component is designed for long-term reliability and flexible wiring configurations.

Technical Specifications

Key Components

- Internal timing mechanism
- Resistor component
- Circuit board

Component Type	Electromechanical Timer
Primary Application	Industrial Cleaning Equipment, Wash Cycle Control, Rinse Cycle Control
Housing Material	Durable Plastic
Wiring Configuration	Multiple terminal connectors
