

Electronic Component Capacitor

This electronic component is a capacitor designed for circuit board installation. It can be implemented in electronic circuits for filtering, energy storage, or signal conditioning.

Product Overview

Professional Grade Electronic Component

This high-quality electronic component is designed for precise circuit board integration, serving as a reliable element for filtering, signal conditioning, or energy storage. Featuring a robust rectangular housing with a distinct central cylindrical module, it offers stability and high performance for professional electronic assemblies. Its design is optimized for consistent reliability in demanding industrial or consumer electronic applications.

Technical Specifications

Construction Materials

- Metallic conductive housing
- Substrate-compatible base

Component Category	Capacitor, Inductor, Circuit Board Component
Mounting Style	Square mounting base
Surface Finish	Gold-colored metallic
