

Electronic Component Connector

This electronic component is designed for use in electronic assemblies, facilitating connections between different parts. It features a gold-colored body with a distinct square cutout.

Product Overview

High-Precision Connector Assembly

This electronic component connector is designed for demanding assembly environments, providing a reliable mounting interface for critical electronic systems. The unit features a robust gold-colored chassis that ensures structural integrity and consistent alignment during installation. Engineered for professional-grade applications, this connector provides the stability required for long-term operational performance in complex assemblies.

Technical Details

Component Type	Electronic Connector / Mounting Component
Body Finish	Gold-tone coating
Form Factor	Rectangular with central square cutout

Certifications

Industry Standards	RoHS Compliant, Industrial Standard
