

Electronic Component for Monitor Systems

This electronic component is designed for monitor and display systems. It may be part of a backlight system or a power inverter for a monitor.

Product Overview

Professional Display Component

The ZT12-100E is a specialized electronic module engineered for integration into professional monitor and display systems. This high-reliability unit features a robust cylindrical metal housing paired with a precision-molded white plastic top and blue cap. It is designed to serve critical functions in backlight management or power inversion, ensuring stable and consistent performance for demanding display environments.

Technical Features

Included Lighting Elements

- Cylindrical lighting unit
- Circular fluorescent lamp

Model Identifier	ZT12-100E
Component Category	Monitor System, Power Inverter, Backlight System

Physical Characteristics

Housing Materials

- Metal cylindrical base
- White plastic cap assembly
- Blue protective terminal cap
