

Electronic Component in Protective Housing

This electronic component is encased in a protective housing. It features a circular opening that reveals a metallic or reflective element within.

Product Overview

Professional Electronic Component

This electronic component is engineered for reliability and integration into professional systems. It is encased within a protective housing to ensure durability and shielding during operation. The design features a high-quality reflective core, optimized for consistent performance in various industrial or technical applications.

Technical Details

Housing Material	Protective cardboard/composite enclosure
Design Features	Protective Housing, Reflective Core, Industrial Grade
