

Electronic Component with Metallic Coated Area

This electronic component features a rectangular substrate with a metallic or coated area in the center. It may function as a connector, sensor, or part of a circuit board assembly.

Product Overview

Professional Electronic Component

This specialized electronic component is designed for reliable integration into high-performance electronics, computer monitors, or peripheral assemblies. Featuring a high-precision rectangular substrate with an integrated metallic coated area, the component is engineered for optimal connectivity and durability. It serves as an essential building block for advanced circuit board assemblies in professional technical environments.

Technical Details

Form Factor	Rectangular substrate
Construction	Metallic coated area, Integrated circuitry, High-density design

Compliance and Standards

Quality Certification

ROHS Compliant • Industry Grade
