

Electronic Controller

This electronic controller series is designed for export applications. It features multiple display outputs, a keypad interface, and power control circuitry.

Overview

LT-C Series Electronic Controller

The LT-C series is a robust electronic controller engineered specifically for export applications. It features advanced microcontroller-based logic, integrated voltage regulation, and reliable relay switching capabilities. Designed for industrial automation and process control, it provides precise monitoring and control through its intuitive keypad interface and multiple display outputs.

Technical Features

Core Functionality

- Voltage Regulation
- Relay Switching
- Process Monitoring

Control Logic

Microcontroller-based

Interface & Display

Keypad Interface, Multiple Display Outputs

Applications

Suitable Industries

Industrial Automation • Process Control Systems
