

Electronic Controller with Tax Control

This electronic controller series provides internal tax control. The system includes display units showing numerical values, a control panel with a keypad and digital display, multiple circuit boards, and power supply units.

Product Overview

Electronic Controller System

The LT-W series electronic controller is designed for internal use, providing precise tax control and operational management. The system integrates a comprehensive control panel, display units, and robust circuit boards to ensure reliable performance. It is engineered to facilitate efficient monitoring and operation through its advanced digital interface.
