

# Electronic Insect Killer

This electronic device attracts and eliminates flying insects. It uses a UV light source to lure insects into a high-voltage grid, electrocuting them upon contact.

## Overview

### Efficient Indoor Insect Control

This electronic insect killer is designed to provide reliable and efficient pest control for indoor environments. Utilizing a high-intensity UV light source to attract flying insects, the device effectively neutralizes them upon contact with an internal high-voltage grid. It is housed in a protective enclosure to ensure safety during operation, making it an ideal solution for homes, offices, and other enclosed spaces requiring minimal maintenance.

## Technical Specifications

Power Source	Standard AC Voltage
Attraction Method	UV Light Source
Elimination Method	High-Voltage Grid

## Usage & Application

Maintenance Requirement	Minimal Maintenance
Suitable Environments	Residential, Office, Indoor Spaces

## Safety Features

Safety Design	Yes
Safety Mechanism	Enclosed protective housing to prevent accidental contact with the high-voltage grid.
