

Electronic Pump Pressure Controller

This electronic pressure control unit is designed for automatic pump management. It maintains consistent water pressure in domestic systems by starting and stopping the pump as needed, while also providing dry-running protection.

Overview

Automatic Pump Control Solution

The DSK-2.3 is an electronic pressure control device engineered for the automatic management of water pumps. It is designed to maintain consistent water pressure in domestic systems by automatically starting and stopping the pump based on demand. With built-in dry-running protection and an intuitive interface, this unit ensures reliable and efficient operation for your water supply system.

Technical Specifications

IP Rating

IP65

Performance Metrics

1.1 kW

Max Power

65 IP

IP Rating

Supply Voltage	220-240V
Frequency	50/60Hz
Maximum Power	1.1 kW
Maximum Current	10(6)A

Features

Key Features

- Automatic pump start/stop
- Dry-running protection
- Integrated pressure gauge
- Power and reset status indicators
