

Electroplated Diamond Grinding and Shaping Tools

Electroplated diamond tools are designed for grinding and shaping hard and brittle materials. They are ideal for use on gems, glass, ceramics, stone, and semiconductors.

Product Overview

High-Efficiency Diamond Tools

These electroplated diamond tools are engineered for precision grinding and shaping of hard, brittle materials. Designed for professional use, they deliver exceptional grinding efficiency and extended tool life. The range includes various configurations suitable for complex material processing tasks.

Suitable Materials	Gems, Glass, Ceramics, Stone, Semiconductors, Hard Alloys, Quenched Steel, Magnetic Materials
---------------------------	---

Product Range

Available Tool Types

- Electroplated hole drills
- Grinding wheels
- Millennium bits
- Diamond rods
- Diamond rings

Customization

Customization	Yes
Customization Details	Other specifications are available upon request.

Performance Features

Key Performance Metrics

1 High Grinding Efficiency	1 Extended Tool Life
