

Elevator and Funicular Car Pulley Blocks

These heavy-duty pulley blocks are used in elevator and funicular car systems. The blocks feature robust metal construction with enclosed sheaves for smooth cable operation.

Product Overview

Heavy-Duty Vertical Transportation Components

These heavy-duty pulley blocks are engineered specifically for demanding elevator and funicular car systems. Featuring robust metal construction and precision-enclosed sheaves, they ensure smooth, reliable cable operation under significant load. Designed for versatility, this set includes both hook and eyelet mounting configurations to accommodate various installation requirements.

Technical Specifications

Construction Features

- Robust metal construction
- Enclosed sheaves for cable protection
- Hook attachment included
- Eyelet mounting included

Mounting Options

Hook • Eyelet

Primary Application

Elevator Systems, Funicular Cars, Heavy Lifting
