

Elevator Brake Assembly for Construction Cranes

This heavy-duty elevator brake assembly is designed for agricultural construction cranes. It features a robust frame with adjustable spring tension for precise braking control.

Product Overview

Heavy-Duty Elevator Brake Assembly

This robust elevator brake assembly is engineered specifically for construction cranes, ensuring reliable performance in demanding agricultural and industrial lifting environments. It features a durable, heavy-duty frame designed to withstand rigorous use, while the adjustable spring tension system provides precise control over braking operations. Designed for seamless integration, the assembly comes equipped with mounting brackets to simplify installation with existing elevator systems.

Technical Specifications

Key Features

- Adjustable spring tension
- Durable construction
- Includes mounting brackets
- Compatible with multiple crane models

Design Focus

Heavy-Duty • Precision Control • Easy Installation

Application

Construction Cranes

Industry Suitability

Agricultural Construction, Industrial Lifting, Crane Systems
