

Elevator Center Opening Landing Door Device

This center opening landing door device is for elevators and escalators. It facilitates reliable operation of elevator landing doors, providing safe and efficient access for passengers.

Product Overview

High-Performance Elevator Door Solution

The KZ9000 center opening landing door device is a specialized component engineered for the reliable operation of elevator landing doors. Designed with precision mechanical linkages and robust electrical safety mechanisms, it ensures smooth and consistent passenger access. This system is built to meet stringent safety standards, offering a durable and efficient solution for modern elevator door systems.

Technical Specifications

Model Number	KZ9000
Sheet Reference	XD1209
Application	Elevator, Escalator
Door Configuration	Center Opening

Key Features

Operational Features

- Smooth and reliable operation
- Precision engineered components
- Robust construction for durability
- Integrated safety mechanisms
- Easy installation and maintenance
