

# Elevator Control Interface Unit

This is a control interface unit for elevators and funicular cars. The unit features a streamlined design and is intended for integration into an elevator or funicular system.

## Overview

### Professional Elevator Control Interface

This Elevator Control Interface Unit is a specialized component designed for seamless integration into elevator and funicular systems. Engineered for reliability and compact installation, it serves as a critical node for communication and control within the car's infrastructure. Its streamlined, durable design ensures it meets the rigorous demands of vertical transportation environments.

## Technical Specifications

Device Type	Control Interface Unit
Primary Application	Elevators, Funicular Systems

## Design & Build

### Design Features

- Streamlined design
- Curved surface accent
- Compact footprint

Form Factor	Compact integration unit
Color Finish	Dark Gray
