

Elevator Electric Motor

High-performance electric motor designed for elevator applications. It features a robust construction with a finned housing for efficient heat dissipation, ensuring reliable operation under demanding conditions.

Product Overview

High-Performance Elevator Motor

This high-performance electric motor is specifically engineered for demanding elevator applications. It features a robust construction with a specialized finned housing designed for superior heat dissipation, ensuring consistent and reliable operation under heavy workloads. With a durable shaft and accessible terminal box, it facilitates straightforward electrical connections for seamless integration into various lifting and hoisting systems.

Technical Specifications

Industry Suitability

Agricultural Construction • Elevator Systems

Primary Application

Elevator, Lifting, and Hoisting

Construction Features

Finned Housing, Heat Dissipation Design, Durable Shaft
