

Elevator Motor for Agricultural Cranes

This elevator motor is designed for agricultural construction machinery, especially cranes. It features a finned body for cooling, a terminal box, and a sturdy base.

Product Overview

High-Performance Elevator Motor

This robust elevator motor is specifically engineered for agricultural construction machinery, including cranes and heavy-duty lifting equipment. Designed for reliability in demanding environments, it features a specialized finned body construction that maximizes heat dissipation and ensures efficient cooling during operation. The unit is equipped with a secure terminal box for safe electrical connections and a reinforced base, providing the stability required for heavy lifting tasks.

Technical Specifications

Primary Application	Agricultural Cranes & Construction Machinery
Cooling Design	Finned body for enhanced thermal management
Mounting	Sturdy base mount
Key Features	Heavy Duty, Heat Dissipation, Secure Mounting, Industrial Grade
