

Elevator Oil Buffer with Reset Spring

These oil buffers have a built-in reset spring to ensure efficient functionality. They can be switched off in two ways: either by disconnection with a lever or via a built-in disconnect mechanism.

Product Overview

Reliable Elevator Safety Solutions

The OB series oil buffer is engineered for high-performance elevator and escalator safety, featuring an integrated reset spring for efficient operation. This system ensures reliable and safe stopping performance in demanding vertical transportation environments. Designed with versatility in mind, it supports multiple switching configurations to suit various installation requirements.

Technical Features

Switching Configurations

- Disconnection with lever
- Built-in disconnect mechanism

Series

OB Series

Key Design Features

Built-in reset spring, Elevator application, Escalator application, Safety-focused design
