

Elevator Steel Wire Rope

High-strength steel wire rope designed for elevator applications. Constructed with multiple strands of galvanized steel wires for enhanced durability and corrosion resistance.

Product Overview

High-Performance Elevator Wire Rope

This high-strength steel wire rope is specifically engineered for reliable operation in vertical lifting systems. Constructed with multiple strands of galvanized steel, it offers superior durability and corrosion resistance for both passenger and freight elevators. Designed for optimal performance and safety, this rope provides the necessary tensile strength and flexibility for demanding commercial and residential applications.

Technical Specifications

Key Features

High Tensile Strength • Corrosion Resistant • High Flexibility

Material	Galvanized Steel
Construction	Multi-strand
Suitable Applications	Passenger Elevators, Freight Elevators, Commercial Buildings, Residential Buildings
