

Elevator Traction Motor

High-efficiency electric motor designed for elevator applications. It features a robust construction with a finned housing for optimal heat dissipation and a sturdy base for secure mounting.

Overview

High-Efficiency Traction Solution

This high-efficiency electric motor is engineered specifically for demanding elevator applications. Featuring a robust, finned housing design, it ensures optimal heat dissipation for reliable, long-term performance. The unit is equipped with a dedicated terminal box for simplified electrical installation and a sturdy base to guarantee secure mounting in various industrial and commercial environments.

Design & Construction

Installation Features

- Integrated terminal box
- Sturdy mounting base

Housing Design

Finned housing for thermal management

Application

Primary Application

Elevator Systems

Suitable Environments

Industrial, Commercial
