

Elliptical Satellite Dish Antenna

This elliptical satellite dish antenna is designed for receiving television and data signals. It features a durable metal frame to withstand outdoor conditions and maximize signal gain.

Product Overview

Professional Elliptical Satellite Antenna

This high-performance elliptical satellite dish antenna is engineered for optimal reception of television and data signals in both residential and commercial environments. The aerodynamic elliptical reflector surface is designed to maximize signal gain while effectively minimizing background interference. Built with a durable metal frame, this antenna provides long-term reliability and stability even under demanding outdoor weather conditions.

Technical Specifications

Antenna Shape	Elliptical
Frame Material	Durable metal
Application Compatibility	Residential, Commercial, Satellite TV, Data Signals

Features

Performance Features

- High signal gain reflector design
- Minimized signal interference
- Weather-resistant construction
- Integrated feed horn assembly
