

Embroidery Machine Mainboard Controller

This mainboard controller is designed for embroidery machines. It features a user-friendly interface with comprehensive controls for efficient pattern management and stable performance.

Overview

Industrial Embroidery Control System

This mainboard controller is a robust and reliable solution designed specifically for industrial embroidery machines. It features a comprehensive interface with a dedicated display screen and an intuitive button layout for precise machine operation. The system supports efficient pattern management and offers stable performance for demanding embroidery applications.

Technical Specifications

Controller Model	BECS-08
Interface Type	Computer Operator Box

Features

Control Capabilities

- Numeric input keys
- Dedicated function keys
- Directional controls
- Pattern management interface

Application Suitability	Industrial Embroidery, Machine Automation, Pattern Management
-------------------------	---
