

# Emergency Power Supply for Fire Lighting

This emergency power supply provides backup power for fire lighting systems. It ensures continuous illumination during power outages, which is crucial for safety and evacuation.

## Product Overview

### Emergency Lighting Reliability

The SR-YJ series Emergency Power Supply is engineered to provide high-reliability backup power specifically for building fire lighting systems. This unit ensures continuous illumination during critical power outages, facilitating safe and efficient evacuation procedures. Housed in a robust industrial cabinet, it features sophisticated battery management and integrated protection circuits to maintain safety compliance.

## Key Features

### System Capabilities

- Automatic mains failure switchover
- Advanced battery charge management
- Integrated overload protection
- Short-circuit protection circuitry
- Industrial-grade enclosure

## Applications

### Primary Applications

Fire Safety, Emergency Lighting, Commercial Buildings, Industrial Facilities

## Certifications

### Compliance

Safety Regulation Compliant
