

EMT Conduit Straps, One and Two Hole

These EMT straps are designed for securing electrical metallic tubing to surfaces. They are available in both one-hole and two-hole configurations.

Product Overview

Professional EMT Conduit Straps

These EMT (Electrical Metallic Tubing) conduit straps are designed to securely fasten conduit to surfaces such as walls or ceilings, ensuring reliable support for electrical installations. Available in both one-hole and two-hole configurations, they provide versatile mounting options to suit various project requirements. Constructed from galvanized steel, these straps offer excellent corrosion resistance for long-lasting durability in diverse environments.

Technical Specifications

Compatible Surfaces

- Walls
- Ceilings

Material	Galvanized Steel
Configurations	One-Hole, Two-Hole
Corrosion Resistance	Yes
Primary Application	Fastening EMT conduit to surfaces
