

Emulsified Asphalt Coating Tester

This emulsified asphalt coating tester determines the coating ability of emulsified asphalt. It allows precise control and observation during the coating test, ensuring accurate and repeatable results.

Overview

Professional Coating Ability Assessment

The Emulsified Asphalt Coating Tester is a precision instrument designed to determine the coating ability of emulsified asphalt. It features a stable base and a support frame for suspending asphalt samples, allowing for consistent and repeatable testing conditions. This apparatus is essential for evaluating the quality and performance of asphalt materials in various industrial applications.

Technical Specifications

Model Number	DSJD-0654
Primary Application	Determining coating ability of emulsified asphalt

Key Features

Design Highlights

- Stable base for vibration-free operation
- Adjustable support frame for sample suspension
- Integrated beaker holder for test liquids
- Designed for precise control and observation

Compliance & Quality

Certifications	Supplier Assessment, Factory Audit
