

Emulsion Bitumen Production Plant

The emulsion bitumen production plant is used in construction projects to create waterproof coatings. Its main feature is the ability to work on wet surfaces with strong bonding capabilities.

Product Overview

High-Efficiency Bitumen Emulsion Production

Emulsion bitumen production plants are engineered for creating high-performance waterproof coatings that excel in wet-basis applications. By enabling cold construction, these systems significantly enhance safety on the job site, eliminating the risks associated with hot bitumen such as fire, burns, and toxic fumes. These plants are designed to improve operational efficiency and reduce labor intensity, providing a cost-effective and environmentally friendly solution for modern construction projects.

Key Advantages

Cold Construction, Environmental Protection, High Bond Strength, Improved Safety, Easy Maintenance

Technical Specifications

Model Specifications

Specification	HIM-EB-60	HIM-EB-120	HIM-EB-200
Capacity (t/h)	6	12	20
Dimensions (m³)	5x2.2x2.5	6x2.5x2.8	12x9x4
Weight (t)	7	10	15
Installed Power (kw)	28	48	100

Power Source

220V/380V, 50Hz
