

Enclosed Cabin Tricycle

This tricycle has a fully enclosed body, resembling a small car, and is designed for passenger transport. It features a single front wheel and two rear wheels for stability.

Overview

Enclosed Cabin Tricycle

The Enclosed Cabin Tricycle is a versatile three-wheeled vehicle designed for urban mobility and short-distance transport. With a fully enclosed body that mimics the design and comfort of a small car, it provides essential protection from the elements. This vehicle features a stable platform with a single front wheel and dual rear wheels, complete with integrated headlights, a front grille, and functional side mirrors for enhanced safety and visibility.
