

Energy-Efficient LED Light Bulbs

Energy-efficient globe-shaped LED light bulbs are designed for general illumination. These bulbs feature a standard screw base for easy installation and provide a wide beam angle, distributing light evenly.

Overview

Energy-Efficient Illumination

These globe-shaped LED light bulbs are engineered for high-efficiency general illumination in both residential and commercial environments. Designed with a standard screw base, they ensure seamless installation across a wide variety of existing lighting fixtures. With a broad beam angle for even light distribution and long-lasting performance, these bulbs provide a superior, energy-saving alternative to traditional incandescent lighting.

Technical Specifications

Bulb Shape	Globe
Base Type	Standard Screw Base
Suitable Applications	Residential, Commercial, General Illumination
