

Energy-Saving Plastic Injection Molding Machine

High-speed plastic packaging product injection molding machines are designed for specialized applications. This advanced machine offers energy-saving features and precise control for efficient plastic component production.

Overview

A2 Series High-Speed Injection Molding

The A2 Series Energy-saving Plastics Injection Molding Machine (Model UN320A-SC) is engineered specifically for high-speed plastic packaging production. This advanced machinery integrates energy-saving technology with precise control systems to optimize cycle times and component quality. Designed for specialized industrial applications, it offers a robust solution for manufacturers seeking efficiency and reliability in high-volume injection molding environments.

Technical Specifications

Model Number	UN320A-SC
Series	A2 Series
Primary Application	Plastic Packaging, High-Speed Molding

Key Features

Performance Highlights

320 Tons

Clamping Force Class

100 %

Energy Efficiency
