

Engine Block Casting

This is an engine block casting designed for small engines. The aluminum casting features cooling fins, a cylinder bore, and mounting points.

Product Overview

Precision Engine Block Casting

This high-quality engine block casting is engineered for optimal performance and durability in small engine or motorcycle applications. Featuring precision-molded cooling fins and integrated cylinder bores, the component ensures efficient heat dissipation and structural integrity. Designed with standardized mounting points, it facilitates seamless assembly with other engine components for reliable operation.

Material & Construction

Base Material	Aluminum
Key Features	Cooling Fins, Cylinder Bore, Integrated Mounting Points

Application Details

Primary Application

Motorcycle Engine • Small Engine
