

Engine Connecting Rod

This connecting rod is designed for internal combustion engines. It transfers motion from the piston to the crankshaft, which is critical for engine operation.

Overview

High-Performance Engine Connecting Rod

This high-strength connecting rod is engineered specifically for internal combustion engines to ensure reliable power transfer. Designed with a robust beam to withstand intense tensile and compressive forces, it facilitates the critical movement from the piston to the crankshaft. Constructed from durable alloy steel, this component offers optimal performance and longevity for demanding engine environments.

Technical Specifications

Material	Alloy Steel
Application	Internal Combustion Engines

Design Features

Key Design Features

- Precision-machined small end for piston pin connection
- Robust beam structure for high-force resistance
- Large end designed for crankshaft journal interface
