

Engine Connecting Rod

This engine connecting rod is designed for optimal strength and durability. It is precision-engineered to withstand high combustion pressures and rotational speeds.

Product Overview

High-Performance Engine Connecting Rod

This high-performance engine connecting rod is designed for optimal strength and durability in demanding automotive applications. Precision-engineered to withstand high combustion pressures and rotational speeds, it ensures reliable performance under significant stress. The component features robust construction with a precisely machined bearing surface for smooth crankshaft operation, utilizing premium-grade materials for an extended service life.

Technical Identifiers

Part Identifiers

- 201-02403-6120
- 0080
- 20140106
- 23081901
- 3161
- 16801
- 21.3.1913

Application Compatibility

Automotive, High-Stress Engines, Heavy-Duty

Engineering Specifications

Key Features

Precision Machined • High-Strength Material • Smooth Bearing Surface • High-Speed Rated
