

Engine Coolant Water Pump

High-performance water pump designed for efficient coolant circulation in internal combustion engines. Features a durable cast aluminum housing for corrosion resistance and optimal heat dissipation.

Product Overview

High-Performance Engine Cooling

This high-performance water pump is engineered for superior coolant circulation within internal combustion engines. Constructed with a durable cast aluminum housing, it offers excellent corrosion resistance and optimal heat dissipation to maintain engine temperature. Featuring a precision-engineered impeller, the unit ensures maximum flow rate and pressure, providing vital protection against overheating in both automotive and industrial applications.

Technical Specifications

Installation Features

- Multiple bolt hole mounting flange
- Standardized inlet and outlet ports
- Secure mechanical fitment

Housing Material	Cast aluminum
Applications	Automotive, Industrial

Performance

Key Operational Benefits

1 High

Corrosion Resistance

1 Maximized

Flow Rate Efficiency
