

Engine Coolant Water Pump for V6 Engines

This engine water pump is designed for V6 engines, featuring a toothed pulley for timing belt synchronization. The pump circulates coolant through the engine block, cylinder head, and radiator to maintain optimal operating temperature.

Product Overview

High-Performance V6 Water Pump

This water pump is specifically engineered for V6 engine cooling systems, ensuring efficient circulation of coolant through the cylinder head, engine block, and radiator. Built with a durable cast metal housing, the unit provides high thermal resistance and structural integrity for demanding operating conditions. It features a precision-machined toothed pulley designed for seamless timing belt synchronization, promoting engine reliability and optimal thermal management.

Technical Specifications

Compatible Engine Type	V6
Housing Material	Cast Metal
Drive Type	Toothed Pulley
Mounting Points	Multiple reinforced points
