Product Overview

High-Performance Engine Cooling

This high-performance radiator is engineered to provide superior heat dissipation and maintain consistent engine temperatures even under demanding operating conditions. Constructed with a durable core and robust end tanks, it ensures reliable long-term performance and optimal cooling capacity. Designed to meet or exceed original equipment standards, this unit provides a precise fit and straightforward installation for automotive applications.

Technical Specifications

Compatible Brand

Toyota

OEM Reference

16400-64290

Material

PA, Aluminum, Plastic
