

Engine Cooling System Water Pump

This water pump assembly circulates coolant within engine cooling systems. It features a toothed pulley for belt-driven operation and a durable cast metal housing.

Product Overview

High-Efficiency Water Pump Assembly

This water pump assembly is engineered for reliable fluid circulation within heavy-duty engine cooling systems. Featuring a durable cast metal housing and a robust toothed pulley for belt-driven operation, it provides consistent performance in demanding environments. Multiple integrated mounting points ensure a secure installation for various automotive cooling applications.

Technical Specifications

Application

Automotive Cooling • Fluid Circulation

Part Identifiers

21126-1307010, 830092

Drive Mechanism

Toothed pulley (belt-driven)

Housing Material

Cast metal
