

Engine Cylinder Block

This engine cylinder block is typically made of cast iron and features intricate machining. It incorporates multiple ports and threaded holes for attaching components such as the cylinder head and oil pan.

Product Overview

Engine Cylinder Block

This engine cylinder block is a robust, machined component designed for internal combustion engines. Featuring a durable cast iron construction with a protective dark coating, it provides a solid foundation for engine assembly. The unit includes multiple precision-machined ports, recesses, and threaded mounting points, ensuring compatibility with essential accessories like the cylinder head and oil pan.

Technical Details

Condition

Refurbished

Material

Cast Iron

Part Identifier

G-08070

Features

Key Features

- Precision machined mounting points
- Threaded holes for engine accessories
- Durable exterior protective coating
- Integrated ports and recesses
