

Engine Cylinder Block

This engine cylinder block is constructed from cast iron. It includes oil passages and mounting points for other engine components.

Overview

Engine Cylinder Block Overview

This high-quality engine cylinder block is engineered for durability and precision in internal combustion engines. Constructed from robust cast iron, it features integrated oil passages and secure mounting points to accommodate essential engine components. Designed with five main bearing caps, this block provides the structural foundation required for reliable crankshaft operation.

Technical Specifications

Casting Markings

- CT
- 3
- 5

Main Bearing Caps	5 count
Material Composition	Cast Iron
Key Features	Internal Combustion, Oil Passages, Crankshaft Ready
