

# Engine Cylinder Boring Machine

This precision cylinder boring machine is designed for reconditioning and resizing engine cylinders. It features a rigid frame for stability and adjustable cutting depths for versatile applications.

## Overview

### Precision Engine Cylinder Boring

This cylinder boring machine is engineered for the precise reconditioning and resizing of engine cylinders. It is specifically designed to support maintenance and repair workflows for motorcycles, automobiles, and small to medium-sized tractors. With a focus on high productivity and processing accuracy, this machine offers a rigid, stable platform that ensures reliable performance in demanding engine rebuilding environments.

## Applications

### Compatible Engines

Motorcycles, Automobiles, Small Tractors, Medium Tractors

## Key Features

### Performance Highlights

**1 High**

Operational Rigidity

**1 High**

Cutting Precision

**1 High**

Productivity

### Operational Benefits

- Easy and flexible operation
- High processing accuracy
- Rigid frame for stability
- Adjustable cutting depths
- Integrated manual feed control
- Coolant system support

## Equipment Details

### Model

T808A
